## **Abstracts**

Global Photoresist Stripper Market is valued approximately USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2021-2027. Photo resist stripping or resist stripping refers to the process of removing unnecessary photoresist layers out from the wafer while also preventing the surface materials below the resist to be attacked from the chemicals used.

Advancements in technologies used in the automation sector and adoption and commercialization of the nanotechnology are the factors contributing to the market growth. For instance, according to Telecom chips, the market growth of China's Integrated Circuit Chips (IC Chips) are expected to reach USD 136.90 billion in the year 2020 and will grow at a steady rate of 20 % year-on-year thus catering to the needs of innovation in technology on the global level.. Also, increasing demand for the semiconductor wafer production and the photoresist stripper chemical in the near future is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Photoresist Stripper market when considering for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World has led to the analysis that Asia Pacific is a significant region across the world in terms of market share owing to increase of semi-conductor chips and IC's (Integrated Circuit) Whereas, North America is anticipated to exhibit the highest growth rate over

the forecast period 2021-2027. Factors such as increasing expenditure in the R&D by the defense and aerospace industries would create lucrative growth prospects for the Photoresist Stripper market across Asia-Pacific region.
