Abstracts

Global Pipette Controller Market is valued at approximately USD 181.64 million in 2021 and is anticipated to grow with a healthy growth rate of more than 4.60 % over the forecast period 2022-2028. Pipette controllers are portable devices that are used to pipette liquids precisely and efficiently. Pipette controllers are used to precisely release and fill liquid from a variety of blow-out pipettes made of plastic or glass. These devices are primarily intended to alleviate the strain of serial pipetting while allowing simple, precise operation for both left and right-handed users. There are two types of pipette controllers: manual and electrical, both of which should work with glass or plastic pipettes. A bulb makes up a controller, which is used for accurate measurement or operation. The pipette controller market has a significant number of new market competitors, which may boost rivalry and impede market growth. Rising product innovation, advantages associated with electric pipette controller and rising prevalence of chronic diseases demands accelerated research activities have driven the adoption of Pipette Controller across the projected period. For Instance: Chronic diseases claim the lives of more than 38 million individuals worldwide each year. Cancers (8.2 million), respiratory illnesses (4 million), and diabetes account for the majority of chronic disease-

related mortality (17.5 million persons per year) (1.5 million). These four groups account for 82 percent of all deaths due to chronic illness. Also, rise in government funding for research activities and rising prominence in healthcare facilities is most likely to boost the overall growth of the Pipette Controller market. However, lack of skilled personnel and presence of local key players can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Pipette Controller market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Rising research and development spending is driving the market growth in North America. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to rising adoption of technologies and prominence in research activities and facilities.
