Abstracts

Global Plasma Feed Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.8% over the forecast period 2022-2029. Plasma feeds include feeds containing animal-derived plasma proteins as feed ingredients. Plasma is a component found in blood, and it contains nutrients such as protein, enzymes, salts, and so on. which is a healthy source for animals. The Plasma Feed market is expanding because of factors such as the demand for high-quality pet food and the increasing demand for natural feed ingredients. This market is dominated by Daka Denmark A/S, Darling Ingredients, Inc., Lauridsen Group, Inc., Kraeber & Co GmbH, and Lican Food.

Plasma has been found to have a positive effect on gut health, mortality, and overall animal performance. It improves the palatability of feed, promotes the maturation of the intestine, nourishes the immunity of the mucosa against bacterial and viral pathogens, and strengthens the intestinal barrier. The widespread use of plasma meal in veal substitutes to provide complete primary feed for colostrum and shrimp, poultry and fish with health-promoting properties will increase the market share of the meal. plasma in the coming years. The increase in the usage of plasma feed in pet food is due to its texture modified ingredients, such as carrageenan. Plasma is an ingredient which improves the texture of wet pet food as well as it has better water retention capacity as compared to other texture-modified ingredients such as wheat gluten. The growing demand for alternative protein sources in the animal feed industry, coupled with the growing demand for plasma feed to replace antibiotics, is driving the plasma feed market. In addition, increasing longevity and constrained land and water resources for

animal feed preparation along with the high demand for animal protein sources are compelling the global plasma protein market. Moreover, the increasing demand for animal-based protein sources and the growing popularity of bovine plasma powder is expected to have a significant opportunity in the forecast year. However, the high cost of Plasma Feed stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Plasma Feed Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the dominance of branded products and the region's increasing disease prevalence. Beef, chicken, and veal are the most ordinarily consumed meats in North America, and it accounts for 28% of the share in Plasma Feed market globally. North America is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising target populations, an increase in the number of collaborations for development, geographic expansion of key players, and active participation of government and nonprofit organizations in the market space.
