## **Abstracts**

Global Plasma Therapy Market is valued approximately USD 261.08 million in 2021 and is anticipated to grow with a healthy growth rate of more than 14.0% over the forecast period 2022-2028.

Plasma is one of the components that are present in the blood, which carries essential nutrients, hormones, and proteins to the body parts that need it. The primary objective of plasma therapy is to transfer the immunity of a healthy individual to another patient. The plasma generally encompasses a large number of antibodies that aid in curing various diseases. The growing incidences of sports injuries, rising number of patients suffering from androgenic alopecia, arthritis, and orthopedic disorders, and increasing adoption of platelet-rich plasma in various therapeutic applications are the chief factors that accelerate the market growth across the globe. For instance, according to the Centers for Disease Control and Prevention, in 2015, nearly 54 million adult population were diagnosed with arthritis in the United States. Also, the amount is projected to reach approximately 72 million by the end of 2030. Consequentially, the rising prevalence of arthritis is likely to fuel the demand for plasma therapy, which, in turn, accelerates market growth. However, the lack of reimbursement policies and restricted

use of platelet-rich plasma (PRP) for patients suffering from diabetes and kidney ailments impedes the growth of the market over the forecast period of 2022-2028. Also, the development of the emerging economies and rising expenditure in the healthcare sector are anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Plasma Therapy market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the increasing investment for R&D activities and the presence of leading market players in the region. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the growing presence of the geriatric population as well as rising incidences of orthopedic disorder, would create lucrative growth prospects for the Plasma Therapy market across the Asia-Pacific region.
