Global Plastic Vials and Ampoules Market reached USD XXX Billion in 2020. The Global Plastic Vials and Ampoules Market tends to grow by a CAGR of XX% in the 2021-2027 period.

Plastic vials and ampoules are small plastic containers and tightly packed pouches mainly used to store pharmaceutical products and chemicals that require higher safety and containment. The surge in the production of vaccines around the globe is the major driving factor helping this market to grow. Another growth factor is the rising application of these products in various end-use industries such as food and beverages, personal care, and home care products. Growing demand for protective transport for liquid chemicals and drugs is creating an opportunity for the market. The presence of electrostatic charge in plastic vials may attract or react with the contained liquid is hampering the growth of this market. Polyethylene plastic vials and ampoules are holding a major share under this market owing to the multi-variant specifications including higher protection, easy recyclability, and lower cost. In 2021, Glassomer GmbH launched a glass-like plastic material that allows injection mold vaccine vials and other complex shapes.

The key regions covered in the global Plastic Vials and Ampoules market are North America, Latin America, Europe, Asia Pacific, and the ROW. North America accounted for the largest market share and it is estimated to grow in the forecasted period owing to

the growing healthcare sector through advancement in research and development technologies.
