Abstracts

Global Platelet Shaker Market is valued at approximately USD 2.44 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 9.0 % over the forecast period 2022-2028. Platelet Shakers use a smooth shaking motion over a lengthy period of time to fully mix the solution inside a flask. Platelet shakers are an important component of clinical and research labs. All platelet shakers have heavy-duty shaking mechanisms built to assure the shakers' long-term dependability under high-stress loads. Blood banks and clinical laboratories are the primary users of platelet shakers. Platelet shakers ensure that platelet bags are constantly mixed. Rising accidental cases, surging prevalence of haematological disease, and rising contribution of key players with their novel products have driven the adoption of Platelet Shakers across the projected period. For Instance: A new high capacity floor standing platelet incubator and agitator named FS100 was released by Boekel Scientific in the year 2020 for storing platelets in hospitals and blood centres,. This novel medical device can hold up to 100 units of platelets and employs advanced thermoelectric heating and cooling to keep platelets at the AABB-recommended storage temperature. Also, rising development of smart hospitals and rising awareness about blood donation are most likely to boost the overall growth of the Platelet Shaker market. However, rising wastage of donated blood and implementation of strict rules & regulations can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Platelet Shaker market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Rising prevalence of cancer is driving the market growth in North America. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to rising healthcare infrastructure and development of smart hospitals.
