## **Abstracts**

Global PMMA Microspheres Market is valued at approximately USD 296 million in 2021 and is anticipated to grow with a healthy growth rate of more than 6.7% over the forecast period 2022-2028. Microspheres are small, spherical particles that are commonly utilized to alter the characteristics of materials such as polymers, glass ceramics, fly ash, and metals. They impart a combination of their physical and chemical qualities when used as fillers or additions, resulting in an improvised form of the substance. PMMA microspheres are known for their optical purity and transparency, as well as their mechanical resilience. They are mostly used in flat display panels and coatings, but they also contribute significantly to other industries such as cosmetics, polymers & films, printing inks, and medical. The market growth is driven by increasing usage in Medical Industry and demand for PMMA Microspheres for cosmetic surgeries. As per Statista, The United States had the most cosmetic treatments in 2020, with over 4.6 million procedures. Brazil had the second-highest number of cosmetic treatments in that year, with about two million procedures. Furthermore, breast augmentation, liposuction, and eyelid surgery are the most popular surgical cosmetic operations performed across the world. Over 1.6 million breast augmentation surgeries are expected to be done in 2020. Botulinum toxin, hyaluronic acid, and hair removal are the

most frequent nonsurgical cosmetic treatments. However, regulatory restraints on rinse-off products impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global PMMA Microspheres Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World.
