Abstracts

Global Point-to-Point Antenna Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. A point-to-point antenna is primarily used to create a link between two end devices or nodes of communication. These antennas receive and broadcast information in many antennas and communication systems by the usage of frequency division multiplexing or time-division multiplexing. This allows receiving and transmission of data and maintaining the bidirectional traffic flow. Factors such as the growing proliferation of the internet, increase in the number of M2M connections among various industry verticals, and ease in installation compared to other antennas are driving the demand for point-to-point antennas across the globe. For instance, according to Statista, in 2020, nearly 749.07 million people were accounted as internet users and this figure is likely to reach around 1,134.04 million people by 2025. Consequentially, the rapid penetration of the internet is augmenting the growth of the market in the impending years. However, the rising consumers' need for extended network coverage and lack of consistency in point-to-point antennas, and variance in operating frequencies for different applications hamper the growth of the market over the forecast period of 2022-2028. Also, the rising investments in smart city projects and the growing deployment of Wi-Fi by various businesses are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Point-to-Point Antenna Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rising investment in the development of the 5G infrastructure and the increasing number of M2M connections across various end-use verticals. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing requirement for the advanced telecommunication infrastructure facilities, and the growing investment in the smart cities' projects, would create lucrative growth prospects for the Point-to-Point Antenna Market across the Asia-Pacific region.
