Abstracts

Global Polyacrylate Rubber Market is valued approximately USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2021-2027. Polyacrylate elastomers or ACM is a synthetic elastomer which consists of acrylic monomers. These polyacrylate elastomers are usually prepared from suspension of polymerization and are used in variety of applications ranging from automotive to transportation to plastics industries and so on. Increasing demand from other end-user industries such as plastics and transportation and increasing demand of turbo-engine hoses are the factors contributing to the market growth. For instance, according to the report published by FIOR Market, the automotive turbocharger's market demand is expected to grow to USD 32.43 billion by the year 2026 from USD 17.14 billion in the year 2018 which will consequently increase the demand of Polyacrylate rubbers. However, lack of skilled professionals and continuous changing environmental regulations impedes the growth of the market over the forecast period of 2021-2027. Also, technological improvements are likely to increase the growth of the market in the forecasting period.

The regional analysis of global Polyacrylate Rubber market when considering for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World has led to the analysis that Europe is a significant region across the world in terms of market share owing to large number of developed countries established in the region. Whereas, Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as high innovations and technological improvements owing to better and sustainable product would create lucrative growth

prospects for the Polyacrylate Rubber market across Asia-Pacific region.
