Abstracts

Global Pompe Diseases Market is valued at approximately USD XXX million in 2021 and is anticipated to grow with a healthy growth rate of more than 4.5% over the forecast period 2022-2028. Pompe disease is a disorder affected by the buildup of a complex sugar called glycogen in the body's cells. It is inherited genetically, and the buildup of glycogen in some tissues and organs, especially muscles, makes them less able to operate normally. In the United States, one in 40,000 people have Pompe disease. The market growth is driven by key factors such as launch of novel drugs and the continued uptake of long-term therapies and increasing development in the field of enzyme replacement therapies. For instance, Enzyme replacement therapy (ERT), which involves giving rhGAA intravenously, is the only treatment for Pompe illness that has been approved, according to a paper titled 'Pharmacological Chaperone Therapy for Pompe Disease' that was published in the Journal of Molecules in November 2021. Researchers are looking for novel treatments because of the shortcomings of ERT, which is the sole medication acknowledged by the US Food and Drug Administration. Furthermore, in August 2021, Enzyme Replacement therapy "Aval glucosidase Alfa" has been approved by United State of Food and Drug Administration, for the patient aged 1 year and older with late onset pompe disease. Moreover, emerging

immunotherapeutic approaches for Pompe disease create lucrative opportunity for the market in upcoming years. However, high Treatment Cost impedes the growth of the market over the forecast period of 2022-2028

The key regions considered for the global Pompe Diseases Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the overall market share owing to rising launches of novel drugs and growing research and development expenditure. However, Asia Pacific is expected to be the fastest growing region due to growing awareness among patients regarding rare disorders and increase in the prevalence of pompe disease in the region.
