## **Abstracts**

Global Portable MRI Market is valued at approximately USD 3.68 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.82% over the forecast period 2020-2028. Portable MRI is a medical imaging system, which is used in radiology to produce pictures of the anatomy and the physiological processes of the body. It enables point-of-care applications for diagnostics. The increasing government spending & initiatives towards public health drives the market growth across the forecast period. For instance, according to The Commonwealth Fund, the United States spent 16.9 percent of gross domestic product on healthcare, OECD countries spent around 8.3 percent and Switzerland spent 12.2 towards public healthcare in 2018. The other driving factor for the market growth is the growing cases of cancer and cardiac diseases. For instance, according to the International Agency for Research on Cancer (IARC), in 2018 there were approximately 17 million cancer cases, and the number of cancer cases is expected to reach 27.5 million by 2040 worldwide. Also, rising technological advancements and increasing number of public and private diagnostic centres are likely to increase the market growth during the forecast period. However, high cost of products and complex scanning procedure impedes the growth of the market over the forecast period of 2020-2028.

The key regions considered for the global Portable MRI market study include Asia

Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share and is also anticipated to exhibit the highest growth rate over the forecast period 2020-2028 owing to the growing prevalence of diseases, new product launches and rising research and development activities.
