## **Abstracts**

Global Position Sensors Market is valued at approximately USD 9.48 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.8% over the forecast period 2022-2029. A sensor that determines an object's position is called a position sensor. A position sensor can show either the object's absolute position or its relative position in three-dimensional space, rotational space, or linear space. The major driving factors for the market are increasing adoption of industry 4.0 and growing adoption of precision agriculture.

Industry 4.0 has enabled the quick development of cutting-edge technology, encouraging industry makers to automate industrial operations. Industrial producers in many different places are primarily making investments to upgrade their manufacturing facilities through the use of fully automated machine tools. For instance, the IFR (International Federation of Robotics) reports that almost 373,000 industrial robot systems were shipped worldwide in 2019. A recent report from World Robotics 2020 Industrial Robots also stated a 12% growth in the number of industrial robots operating in factories around the world, for a record-breaking total of 2.7 million robots. The market for position sensors has so expanded due to manufacturers' propensity towards automation. This investment was made with the intention of reducing the overuse of pesticides and fertilizers. The business also created the CX-6 SMART Seeder for farmers using these funds. Moreover, rising technological innovations is creating a

lucrative growth opportunity for the market over the forecast period 2022-2029. However, low accuracy of sensor stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Position Sensors Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Europe dominated the market in terms of revenue, owing to rising demand for position sensors in aerospace and defense, automotive and medical companies. Along with this, presence of key market players and growing initiatives are driving the growth of the market over the forecast period. Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to rising development by the manufacturing companies and growing consumer electronics devices which is driving the growth for position sensors.
