Abstracts

Global Post-Op Shoes Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028.

The Post-Op Shoes can be defined as shoes that are designed specifically to help support the mechanics and structure of the feet, ankles, and legs following post-operative procedures and forefoot trauma. These shoes are designed in such a way that prevent rubbing against the inside of the shoes, and don't have heels to eliminate unnatural and uncomfortable positions of feet. These shoes come in different sizes to accommodate place for bandage and medication. The growing prevalence of road traffic injuries and increasing number of food surgeries worldwide as well as new Product launches from leading market players are factors that are accelerating the global market demand. For instance, according to World Health Organization estimates – around 1.3 million people die each year due to road traffic crashes and around 20 and 50 million more people suffer non-fatal injuries. Furthermore, around 93% of the world's fatalities on the roads occur in low- and middle-income countries. Moreover, leading market players are coming up with innovative products to leverage the growing demand for post-op shoes. For instance, in 2021, DARCO launched a new open healing shoe range named Commodus Open. These new shoes are designed to stabilize foot and offers shock and pressure redistribution after surgery and wounds. Also, growing awareness towards post operative shoes and rising penetration of online sales channels are anticipated to act as a catalyzing factor for the market demand during the forecast

period. However, a high cost associated with post-op shoes and lack of adoption in low-income countries impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Post-Op Shoes Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing healthcare spending and presence of leading market players. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as growing incidences of road traffic injuries and rising awareness towards post operative shoes, would create lucrative growth prospects for the global Post-Op Shoes Market across the Asia Pacific region.
