Abstracts

Global Power Optimizer Market is valued at approximately USD2.88 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 10.81% during the forecast period 2023-2030. Power optimizers are electronic devices utilized in Photovoltaic (PV) systems to enhance energy harvest by regulating the output of individual solar panels. They maximize energy production by mitigating mismatch losses and mitigating shading effects. Power optimizers increase system efficiency and reliability, thereby optimizing overall PV system performance. The Global Power Optimizer Market is continuously growing due to factors such as growing awareness of energy efficiency and increasing solar PV installations.

Due to a rapid increase in solar PV installation, the demand for power optimizers have gradually increased. According to the International Energy Agency IEA, in 2022, solar PV generation surged by a record 270 TWh, marking a 26% increase to nearly 1,300 TWh. This growth outpaced all other renewable technologies, surpassing wind for the first time. The growth aligns with the Net Zero Emissions by 2050 Scenario's projections for 2023-2030. Factors such as improved economic viability of PV, robust supply chain development, and supportive policies in key regions such as China, the US, the EU, and India are propelling capacity expansion. Consequently, solar PV's tracking status was upgraded in 2023 from 'more effort needed' to 'on track.' Sustaining this

growth to meet net-zero targets may necessitate tripling annual capacity additions compared to 2022 until 2030. This results in the growth and expansion of the Power Optimizer Market globally. Moreover, government initiatives and expansion in the residential sector are opportunities for the Global Power Optimizer Market. However, the availability of alternative technologies and perception of reliability stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Power Optimizer Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022 owing to factors such as rapid industrialization, rapid development in the renewable energy sector and easy installation of power optimizer. Europe is expected to grow significantly over the forecast period, owing to factors such as the expansion of residential as well as commercial infrastructure, growing awareness for energy efficiency and investments in the electrification of rural as well as remote areas that led to the market growth of Power Optimizer Market globally.
