Abstracts

Global Preeclampsia Diagnostics Market is valued at approximately USD 1.03 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 2.2% over the forecast period 2022-2029. Preeclampsia, commonly referred to as toxemia, is a progressively growing condition marked by raised blood pressure and high protein in pregnant women's urine. One of the hypertensive disorders of pregnancy that accelerates maternal and perinatal morbidity and mortality rates among women in industrialized and developing countries is this one. The Preeclampsia Diagnostics market is expanding because of factors such as increasing incidence of Preeclampsia among female population, and growing focus on the development of innovative preeclampsia diagnostic products.

Pregnant women globally are likely to have a rising demand for early preeclampsia diagnosis, which is anticipated to fuel the expansion of the global preeclampsia diagnostics market over the forecast period. For instance, the Preeclampsia Foundation predicts that over 10 million women worldwide suffer from preeclampsia each year and that preeclampsia contributes to over 2.5 million preterm births. Furthermore, Preeclampsia affected at least 1 in 7 deliveries during this time, according to the Centers for Disease Control and Prevention, and its prevalence among hospitalisations for childbirth increased from around 13% in 2017 to 16% in 2019. Another important component driving space increase is increase in funding for diagnosis and treatment of Preeclampsia. For instance, on February 2, 2022, the Preeclampsia Foundation and Preeclampsia Foundation Canada, its Canadian affiliate, would each award one medical

research Vision Grant, up to US\$ 20,000, for the study of preeclampsia and related hypertensive diseases of pregnancy. However, less awareness about preeclampsia may halt market growth.

The key regions considered for the Global Preeclampsia Diagnostics Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue. The market expansion in this region is attributed to the increasing adoption of technologically improved goods, rising patient and healthcare provider awareness of the seriousness of the disease, and considerable healthcare spending. Additionally, the industry is projected to rise as more cutting-edge preeclampsia diagnostics products are introduced. Whereas Europe is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising target populations. Further, a sizable patient base with hypertensive problems during pregnancy is expected to fuel market growth. Additionally, a rise in government healthcare organizations' approvals of the diagnosis of hypertensive problems in pregnancy may promote market expansion in Europe.
