Abstracts

Global Prepacked chromatography columns Market is valued approximately at USD2.4 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.4% over the forecast period 2021-2027. Chromatography is a method for isolating certain chemical compounds from a mixture of chemicals. The pre-filled columns used in chromatography testing techniques are known as pre-packed chromatography columns. Along with instruments and other consumables, columns are an important component. The market is expected to be driven by several factors, including new international global alliances between leading research institutes, food and drug development companies, and beverage analysis. Moreover, the number of drug discovery applications is growing, as is the amount of money spent on novel molecules in nutraceuticals. This market is expected to be fueled by the growing demand for products that meet international quality standards. For instance, as per Statista, every nation is investing in the biotechnology sector's research and development. Switzerland spent about USD 3.9 billion on research and development, followed by France, which spent over USD 4 billion in 2019. However, technological limitation of the column size may impede market growth over the forecast period of 2021-2027.

Geographically, North America is dominating the Prepacked Chromatography column market owing to presence of multiple leading companies in the pharmaceutical and biotechnology industries in the region and availability of a technologically advanced R&D infrastructure in North America. However, APAC is recorded to be the fastest growing market due to rapid growth of process chromatography technologies in agriculture and pharmaceutical industries and growing demand for purification of antibodies, and recombinant proteins and vaccines in the region.
