## **Abstracts**

Global Primary Cell Culture Market is valued approximately USD 3.05 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 11.06 % over the forecast period 2020-2027. Cell culture is the method of extracting cells from an animal or plant source and growing them under controlled conditions. Furthermore, this artificial environment contains nutrients that are essential for cell growth and proliferation, such as ideal temperature, gases, pH, and humidity which also helps researchers to study about properties of cells and micro biology. Factors such as increasing cancer cases, cardiovascular diseases, advancements in genetic research process, growing investment in research and development are factors that has led the adoption of primary cell culture across the forecast period. For instance, as per WHO, in 2020, Chronic hepatitis C infection affected 71.0 million people worldwide. According to National Cancer Institute, in January 2019, the number of cancer survivors in the United States was projected to be 16.9 million. By 2030, the number of cancer survivors is expected to

rise to 22.2 million. However, high capital for investments and lack of expertise may impede the growth of the market over the forecast period of 2020-2027. Also, with the increasing research and demand for stem cell therapy and emergence of various chronic diseases, the adoption & demand for primary cell culture is likely to increase the market growth during the forecast period.

The regional analysis of global Primary Cell Culture market is based on the key regions such as North America, Latin America, Europe, Asia Pacific, and Rest of the World. In terms of market share, Europe is the leading region across the world due to the growth in geriatric population & affordability of urgent care services as well as the well-established healthcare infrastructure. Also, the highest growth rate is expected from the Asia Pacific region over the forecast period 2020-2027. Factors such as increasing disposable income, growing incidences of injuries and improving healthcare infrastructure are contributing to the market growth across Asia-Pacific region.
