## **Abstracts**

Global Primary Water & Wastewater Treatment Equipment Market is valued approximately USD 12.52 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3.5 % over the forecast period 2021-2027. Separation of floating debris and heavy solids from effluent is part of primary water and wastewater treatment. The slurry is separated from impurities by passing through numerous tanks and filters. Rising demand for clean water and the increasing number of users is expected to boost the demand for the construction of new slurry treatment plants has led the adoption of Wastewater Treatment equipment across the forecast period. The Clean Water State Revolving Fund (CWSRF) programme in the United States is projected to boost demand for wastewater management systems by increasing federal funding in the wastewater management sector. This will, in turn, have a favourable impact on the country's principal water and wastewater treatment equipment market. However, high manufacturing and maintenance cost of equipment impedes the growth of the market over the forecast period of 2021-2027. Also, new product developments, and mergers and acquisitions to increase their market penetration, is likely to increase the market growth during the forecast period.

The regional study of the worldwide Primary Water & Wastewater Treatment Equipment includes Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Due to the presence of a robust customer base in the region, Asia Pacific dominated the market and accounted for 33.5 percent of global revenue in 2019. A large increase in demand for primary water and wastewater treatment equipment has resulted from the

strong customer base. Furthermore, improved economic conditions, rising population, and the presence of one of the most significant manufacturing sectors are expected to complement the market growth in the region.
