## **Abstracts**

Global Print Label Market is valued approximately USD 42.7 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 4.26% over the forecast period 2023-2030. The print label industry is evolving in response to shifting consumer demands and industry trends. Factors such as the demand for more sustainable packaging solutions, the rising popularity of color digital printing, and an increasing preference for personalized products contribute to this evolution. Additionally, changing buyer preferences directly influences the industry's direction. Print labels serve multiple purposes for manufacturers, including product customization and packaging enhancement. They also play a crucial role in product identification and combating counterfeit goods. With diverse formats and designs available, print labels cater to the specific requirements of beverage manufacturers. The market growth is driven by key factors such as growing 3D Print Technology, increased Focus toward Manufacturing in the Developing Economies, increasing demand for manufactured goods.

In a 2021 study conducted by Martin Placek, findings revealed that the prevailing 3D printing technologies are fused deposition modeling (FDM)/fused filament fabrication (FFF) and selective laser sintering (SLS). It was found that 71% of respondents utilized FDM/FFF in-house, while 42% opted for SLS via external services. According to Statista, the global 3D printing market exhibited substantial growth, with its value reaching approximately USD12.6 billion in 2020. Projections indicate a compound annual growth rate of approximately 17% from 2020 to 2023, highlighting the industry's significant expansion. Furthermore, Increased investment in research and development to advance digital printing labels is a key driver of market growth. An illustrative example is Print-Leeds, which, in May 2021, bolstered its market position by introducing a self-adhesive label division. This expansion came as a result of a substantial \$1 million investment in a new printing press, finishing equipment, and management information system (MIS), showcasing a commitment to innovation and growth. However, lack of Products with Ability to Withstand Harsh Climatic Conditions stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Print Label Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific is leading region and expected to be the fastest growing region owing to increasing interest of companies and the expansion of e-commerce giants such as Alibaba in China is anticipated to be a driving force behind the growth of the print labels market in the forecast period. For instance, during Alibaba's Double 11 shopping festival, Chinese consumers received nearly 1.9 billion packages, indicating a significant demand for print labels.
