Global Printed Circuit Board (PCB) Market is valued at approximately USD 78.75 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 5.00% over the forecast period 2023-2030. A Printed Circuit Board (PCB) is a board made of insulating material, such as fiberglass, with conductive pathways etched onto the surface to connect different components of an electronic circuit. PCBs are used in a wide range of applications, including consumer electronics, automotive, aerospace, and healthcare. The PCB market includes the manufacturing, design, and supply of PCBs and related components, including single-layer, double-layer, multi-layer, and high-density interconnect (HDI) PCBs. The major driving factors for the Global Printed Circuit Board Market are growing demand for electronic devices, increasing demand for IoT devices and increasing adoption of electric vehicles. Moreover, growth in the healthcare industry and advancements in PCB technology is creating a lucrative growth opportunity for the market over the forecast period 2023-2030.

The adoption of electric vehicles is driving the demand for PCBs in the automotive industry. PCBs are used in various components of electric vehicles such as battery management systems, motor control units, and charging systems, which is driving the growth of the PCB market. In 2019, the global electric vehicle market share was around 2.5%, which is expected to grow to around 7.6% by 2023, according to a report by

Statista. Similarly, in 2019, the number of electric vehicles on the road worldwide surpassed 5 million, according to the International Energy Agency (IEA). This number is expected to reach 145 million by 2030, driven by government policies and falling battery costs. Along with this, in 2020, China, the world's largest auto market, announced plans to phase out internal combustion engine vehicles and switch to electric vehicles by 2035, according to a report by CNBC. However, the high cost of Printed Circuit Board (PCB) stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Printed Circuit Board (PCB) Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. The Asia-Pacific region is the largest market for electric vehicles due to strong government support, favorable regulations, and the presence of leading EV manufacturers such as Tesla, BYD, and Nissan. China is the largest market for electric vehicles in the world, accounting for around 50% of global EV sales in 2021. Other countries in the region such as Japan, South Korea, and India are also seeing significant growth in EV adoption. The European market for electric vehicles is rapidly growing due to strict emissions regulations, government incentives, and the expansion of charging infrastructure. Norway is currently the leader in EV adoption, with electric vehicles accounting for more than 80% of new car sales in 2021. Other countries in the region such as Germany, France, and the UK are also seeing significant growth in EV adoption.
