Global Product Lifecycle Management in Apparel Market is valued approximately USD 397.04 million in 2018 and is anticipated to grow with a healthy growth rate of more than 6.80% over the forecast period 2019-2026. Product life cycle management (PLM) software includes all the software that is used for the development and automation of a product during various stages of production such as idea conception, designing, and manufacturing stages. PLM shortens the development cycle of products to improve the time-to-market for apparel. For instance: computer aided design (CAD) reduces the analysis and designing time to manufacture cost-effective products. Various organizations install PLM software such as CAD because it increases the operational efficiency and reduces the product development cost. Rising adoption of cloud-based PLM is one of the major factors responsible for high CAGR of the market. As product life cycle management is costly and for reducing the cost of adopting PLM, many companies are adopting cloud-based PLM software. Increasing focus towards digital manufacturing is the factor offers growth opportunities. Many companies offer cloud-based PLM services for several vendors. This deployment through infrastructure-as-a-service helps end-users to reduce upfront costs and the total cost of ownership.
