Abstracts

Global Progressing Cavity Pump Market is valued approximately at USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. A Progressing Cavity Pump is a type of positive displacement pump that moves fluid through a sequence of small, fixed-shape cavities as a helical rotor turns inside a stator. This design results in a smooth and pulsation-free flow, making PCPs suitable for various applications such as water & wastewater management, oil & gas, and more. The key factors driving the market growth are growing need for water & wastewater treatment, rising demand to enhance operational process, growing oil and gas industry, and expansion of mining industry which is anticipated to support the market growth during projected period.

Additionally, the growing oil and gas industry can have a significant impact on the Progressing Cavity Pump (PCP) market. PCPs are commonly used in the extraction and production of oil and gas. They are effective in handling viscous fluids, making them suitable for extracting heavy crude oil from reservoirs. As the oil and gas industry expands and explores new reserves, the demand for PCPs increases. According to the International Energy Agency, total oil demand across the globe was 91 million barrels per day in 2020, climbed to 99.4 million barrels per day in 2022, and is expected to reach 104.1 million barrels per day by 2026. Such an increase in oil and gas production

and consumption is driving the oil and gas industry growth which is anticipated to support the market growth during the forecast period. Moreover, the growing investments in food & beverage industry is anticipated to create the lucrative opportunity for the market growth during the forecast years. However, the maintenance costs associated with progressing cavity pumps stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Progressing Cavity Pump Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 with largest market share owing to the surge in the demand for oil & gas and food & beverage, rising focus on oil & gas and water treatment plants, and growing investments in oil, gas and water & wastewater treatment industry. Whereas, the Asia Pacific region is expected to grow with the highest CAGR during the forecast period, owing to factors such as the supportive initiative to increase investments in manufacturing sector, rising demand for LNG, increasing investment in food & beverage sector and rising investments in oil & gas and water & wastewater treatment industry.
