Abstracts

Global Project Management Software Systems Market is valued approximately at USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2027. As the scale and scope of today's companies grow, an all-inclusive approach is required to handle and organize the whole portfolio of various initiatives of the enterprise. Such approaches allow the management to balance schedules, workloads, budgets and money, closely track the development of the project and comment on the performance of the implementation. Significant industry development factors continue to obtain a 360-degree view of project processes and resource management and the increasing need for cloud-based project management software systems solutions. Digitalization across sectors and growing expenditure in creating and implementing innovative and advanced technology are some of the factors that lead to the growth of the demand for project management software systems. Strict laws and regulations that impede the quick adoption of technologies, improve interoperability problems and lack of a robust development plan are factors that inhibit business growth. Moreover, the integration of social media such as facebook, LinkedIn and others with project management tools will be one of the major trends that will gain traction in the market for project management in the coming years. Because social networking sites allow for direct contact between people, the incorporation of marketing project monitoring tools with social media can provide workers with collaborative

management functionality which will also enable them to build chat boards, trade suggestions which share sensitive details across protected communities. The growing adoption of automation in the sector and the growth of the connected ecosystem in the oil and gas sector have further boosted the adoption of PMS with the need for collaboration, mobility, workflow and analytical functions. For instance, in January 2020, InEight has launched new project planning feature for oil and gas sector. The regional analysis of global Project Management Software Systems market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. The North American region accounts for the majority of the market share owing to the growing number of organizations implementing project management software solutions. The growing need for organizations to effectively monitor and maintain their initiatives is driving this market for applications in the field. The usage of job management programs for the efficient implementation of assignments and adaptive work preparation is projected to further boost the industry over the forecast period (2020-2027).
