Abstracts

Global Prostaglandin Market is valued approximately USD 461.30 million in 2018 and is anticipated to grow with a healthy growth rate of more than 4.84% over the forecast period 2019-2026. Prostaglandins are autocannal derived from arachidonic acid. They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response. Prostaglandins control several processes in the body, especially as it relates to the healing process. When tissue is damaged or infected, this group of hormones will create the reactions that cause pain, fever and inflammation, which sparks the healing process. Prostaglandins also stimulate the formation of a blood clot and the contraction of the blood vessel wall when body is bleeding. Once blood clots are no longer needed and the injury begins to heal, another prostaglandin will stimulate the changes that allow the clots to dissipate and the blood vessel wall to relax. Increasing incidences of digestive problem and rising prevalence of cardiovascular diseases are the factors that contributing towards growth of global Prostaglandin market. Further, prostaglandins help in increasing concentration of cAMP, calcium ions and activate G proteins inside the cells, all of which are involved in the transfer of energy and inflammatory signaling process which is the factor that regulates their demand across various regions. However, high cost of treatment and several side-effects associated with its over-dose such as migraines and decrease the ability to fight with cancer are the factors that anticipated to restrain the market growth during the forecast period. The regional analysis of global Prostaglandin market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
