## Abstracts

Global Pulmonary Arterial Hypertension Market is valued approximately at USD 5.3 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.9% over the forecast period 2021-2027. Pulmonary Arterial Hypertension is a kind of high blood pressure which affects arteries in the lungs area and cause heart related problems. The global Pulmonary Arterial Hypertension market is being driven by rising incidents of Pulmonary Arterial Hypertension (PAH) and growing geriatric population. Furthermore, the government support for development of orphan drugs will provide new opportunities for the global Pulmonary Arterial Hypertension industry. For instance, according to the study of an American College of Cardiology, in year 2020, the incidence rate of COVID-19 infection in PAH patients was 2.1 cases per 1,000 patients. This increased the demand for PAH drugs for its treatment to manage the risk of COVID-19 infection. As a result, increased in PAH patients and related diseases will serve as a catalyst for the Pulmonary Arterial Hypertension industry in the future. However, patent expiration of key molecules may impede market growth over the forecast period of 2021-2027.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key regions considered for the regional analysis of global Patent Expiration of Key Molecules market. The improving healthcare systems and rapid economic developments as well as large population base makes Asia Pacific the leading region

across the world in terms of market share. Whereas Asia pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to high burden of diseases, such as HIV and diabetes in the region.
