Abstracts

Global Pulmonary Drug Delivery Systems Market is valued approximately USD 46613.07 million in 2021 and is anticipated to grow with a healthy growth rate of more than 6.80% over the forecast period 2022-2029. Pulmonary drug delivery systems are devices that are used to deliver medication directly to the lungs through inhalation. These devices are commonly used to treat respiratory diseases such as asthma, chronic obstructive pulmonary disease (COPD), and cystic fibrosis. Thus, the major driving factors for the Global Pulmonary Drug Delivery Systems Market are increasing prevalence of respiratory diseases, increasing healthcare expenditure and growing demand for personalized medicine. Moreover, technological advancements and government initiatives is creating lucrative growth opportunity for the market over the forecast period 2022-2029.

The US FDA has been working to encourage the development of new pulmonary drug delivery systems. In 2019, the FDA issued a guidance document for industry on the development of inhaled drug products. The document provides recommendations on the design of clinical trials, the use of in vitro testing methods, and other aspects of product development. Similarly, in 2020, the European Medicines Agency (EMA) issued a reflection paper on the development of inhalation products. The paper provides guidance to drug developers on issues such as product design, formulation, and clinical

trial design. However, the high cost of Pulmonary Drug Delivery Systems stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Pulmonary Drug Delivery Systems Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is expected to hold the largest share of the pulmonary drug delivery systems market due to the high prevalence of respiratory diseases such as asthma and COPD in the region, as well as the presence of well-established healthcare infrastructure and high levels of healthcare expenditure. The Asia-Pacific region is expected to experience the fastest growth in the pulmonary drug delivery systems market, driven by factors such as increasing healthcare expenditure, rising disposable incomes, and increasing awareness of respiratory diseases. In addition, the region's large population and high burden of respiratory diseases are expected to contribute to market growth.
