Global Pulmonary Function Testing System Market is valued approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Pulmonary function testing is a testing process that can evaluate as well as measure the efficiency of inhalation and exhalation functions done by the lungs. It is crucial for determining how well oxygen is transferred into the blood, as well as for identifying certain lung conditions like asthma, bronchitis, and emphysema and finding out what is causing shortness of breath. Spirometry, that measures how much air one can inhale and exhale, is one of the more popular pulmonary function tests. Additionally, it measures how quickly someone can expel air from their lungs. This test evaluates how efficiently oxygen enters the bloodstream from the lungs. The key factor driving the market growth is growing prevalence of respiratory diseases is support the market growth, in recent years, breathing illnesses, such as asthma, lung cancer, Chronic Obstructive Pulmonary Disease (COPD), and occupational lung diseases, were the leading reasons of fatality across the globe. In addition, the prevalence of asthma and chronic obstructive lung disease is significantly rising worldwide, especially in developing nations. Also, another factor driving the market growth is rise in awareness of early diagnosis and growing geriatric population is create the lucrative demand for the market.

Pulmonary Function Testing are very useful for identifying the initial abnormalities in

asymptomatic patients and in assessing the lung damage before any signs and symptoms develop. These factors have made pulmonary function testing crucial among doctors for the early screening and diagnosis of lung diseases. For instance, according to a study that published in the May 2021 issue of the American Journal of Managed Care (AJMC), doctors should use pulmonary function testing to make sure that patients are properly diagnosed with COPD. Such studies encourage the use of lung testing equipment, thereby boosting their usage over the projection period. Also, according to Statista, in 2019 the number of chronic obstructive pulmonary disease (COPD) cases in East Asia and South Asia was 46.7 million and 45.7 million respectively. Additionally, rising the adoption of technologically advanced medical system will create the lucrative opportunity for the market during forecast period. However, the lack of skilled healthcare professionals in underdeveloped countries stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Pulmonary Function Testing System Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the dominating region across the world in terms of market share, owing to the rising prevalence of chronic respiratory diseases and growing number of hospitals in the region. Whereas, Asia Pacific is also anticipated to exhibit highest growth rate over the forecast period, owing to factors such as rising geriatric population, presence of key market player, and growing investment in medical infrastructure would create lucrative growth prospects for the Pulmonary Function Testing System market across Asia Pacific region.
