Global Pulp Moulding Machines Market reached USD 700 million in 2020. The Global Pulp Moulding Machines Market tends to grow by a CAGR of 3.9% in the 2021-2027 period.

Pulp moulding machines are used to manufacture trays, boxes, containers, plates, cups, and bowls from recycled paper owing to which these products are highly sustainable and environmentally friendly. The major driving factor is the rise in demand for ecological and sustainable packaging products which is going to boost this market. Another trending factor driving the market is the increasing use of pulp moulded packaging products in a wide end-use sector including food and beverages, electronics, pharmaceuticals, etc. The high cost of pulp moulded machines is expected to restraint the growth of the market. Foodservice operators and retail chains switching to this machine owing to attract the customer towards their product through packaging is creating an opportunity for this market. Fully automated moulding machines are dominating the market owing to the better productivity and efficiency that they provide while manufacturing. The trays segment holds the major share because of the high demand for trays due to low cost, and easy availability. In 2018, Huhtamaki one of the players in this market set up a new manufacturing plant to cater to the increasing need

of egg packaging customers in the South Africa region.

The key regions covered in the global Pulp Moulding Machines market are North America, Latin America, Europe, Asia Pacific and ROW. North America accounted for the largest market share and it is estimated to grow in the forecasted period owing to the skilled workforce, latest technology, increasing demand for fiber packaging from food and beverages, and healthcare segments.
