Global Pupillometer Market is valued approximately at USD 363 million in 2019 and is anticipated to grow with a healthy growth rate of more than 5.2% over the forecast period 2020-2027. Pupillometer is the ocular checking instrument typically used in the critical care medicine and ophthalmology for measuring the distance between pupils and pupil reactivity. A pupil evaluation is generally based on getting the pupillary information that can be extensively used as an indication for potential medical intervention and patient management. Variation in the evaluation indicates damage to the nerves from injuries, trauma, and/or drug use. Pupillometer is a non-invasive and safe assessment diagnosis procedure of pupil and is mostly used in the assessment of neurological disorder. As the changes in brain activity have a direct impact on pupil dilation. An increase in the prevalence of neurological diseases such as Parkinson disease, growing awareness among patients towards eye diseases, and rising adoption of information technology in the new product development are the few factors responsible for the CAGR of the market during the forecast period. According to the study of Global Burden of Disease 2015, it is estimated that the prevalence of Parkinson's to be approximately 6.2 million people worldwide in 2015 and it would reach approximately 13 million people with Parkinson's by 2040. Also, numerous Parkinson's Disease Foundation reveals that approximately 60,000 Americans are diagnosed with Parkinson's disease every year. This is likely to accelerate the demand for pupillometer all over the world. However, the high cost of the device and lack of skilled professionals are the few factors impeding the market growth over the forecast period of 2020-2027.

The regional analysis of the global Pupillometer market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the rising prevalence of vision-related health problems and neurological diseases, along with the wide presence of market players in the region. Whereas Asia-Pacific is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the increasing awareness regarding ophthalmic disease and improving healthcare infrastructure in the developing nations, such as China and India, are the few factors creating a lucrative opportunity for the growth of the pupillometer market in the Asia-Pacific region.
