## **Abstracts**

Global Q-PCR Reagents Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The increasing geriatric population and product launch has led the adoption of Q-PCR Reagents across the forecast period. For instance, according to Statistics Netherlands' population, in 2019 half of the Dutch adult population was older than 50 years which will rise the denture market. So, there is nearly 14 million adults and 7 million people over 50s. And the Dutch population is aging rapidly as there are 6.9 million of 13.7 million adults who are older than 50 years. s. Also, rise in product

launch is also driving the market growth of Q-PCR Reagents market for the forecasted period. In 2021, a US based company Biotium released a EvaRuby which is Dye for qPCR and HRM and a spectrally unique red fluorescent intercalating dye which can be incorporated into probe-based qPCR assays. Also, advancements in the technology which accelerate the adoption & demand for Q-PCR Reagents is likely to increase the market growth during the forecast period. However, lack of awareness in the emerging nations impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Q-PCR Reagents Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the significant region across the world in terms of market share owing to the strong presence of key market player and rising prevalence of communicable diseases for example HIV and others. Whereas, Asia-Pacific is anticipated to exhibit highest CAGR over the forecast period 2022-2028. Factors such as increase in prevalence of global life science companies in the APAC region and rising focus of government on the rising awareness about the gene-based diseases would create lucrative growth prospects for the Q-PCR Reagents Market across Asia-Pacific region.
