## **Abstracts**

Global Quadriplegia Treatment Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.1 % over the forecast period 2021-2027. Quadriplegia Treatment refers to the treatment of spinal cord injury or other disorders. In this, the patient is immobilized with medicated equipment while medical specialists monitor other conditions. The increasing cases of spinal cord disorders have led to the adoption of Quadriplegia Treatment across the forecast period. For Instance: According to the World Health Organization, every year approximately 25,000 to 500,000 people suffered from spinal cord injury globally. According to spinalcure.org in 2020, the cases of spinal cord injury are increasing in geriatric population. In Australia, approximately 20,800 people are having spinal cord related problems. Rising cases of road accidents enhance the market growth of quadriplegia treatment. Also, with the increasing R&D activities and technological advancements in the field of quadriplegia, the adoption & demand for Quadriplegia Treatment is likely to increase the market growth during the forecast period. However, high treatment cost impedes the growth of the market over the forecast period of 2021-2027.

The geographical regions considered for the global Quadriplegia Treatment market analysis include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is deemed as the significant region across the globe in terms of huge market share due to the growing geriatric population and promptness & affordability of quadriplegia services coupled with the well-established healthcare infrastructure. Whereas, Asia-Pacific is also estimated to attain a maximum growth rate during 2021-2027. Factors such as rising disposable income, rising incidences of injuries and improving healthcare infrastructure would create beneficial growth forecasts for the Quadriplegia Treatment market across Asia-Pacific region.
