Global Quartz Market is valued approximately USD 6740.2 Million in 2022 and is anticipated to grow with a healthy growth rate of more than 4.19% over the forecast period 2023-2030. Quartz is an engineered stone composed primarily of natural quartz crystals combined with resins, pigments, and other additives. It is a highly durable and versatile material used in various applications such as countertops, flooring, and wall claddings. Quartz offers benefits such as resistance to stains, scratches, and heat, as well as low maintenance requirements. With its wide range of colors, patterns, and finishes, quartz provides an aesthetically appealing and reliable option for both residential and commercial spaces. The driving factors boosting the market growth are growing construction industry and increasing demand in Kitchen and Bath applications.

According to Statista, the size of the construction industry in 2030 is expected to increase from USD 7.3 trillion in 2021 to USD 14.4 trillion. As urbanization continues to rise and construction activities increase, there is a higher demand for quartz as a durable and aesthetically appealing material for countertops, flooring, and wall claddings in residential and commercial buildings. Moreover, increasing awareness of quartz and rising demand for sustainable materials is expected to create lucrative opportunities for the market. However, fluctuating raw material costs and high competition from alternative materials such as natural stone (granite, marble), solid surface materials, and other engineered stone products stifles market growth

throughout the forecast period of 2023-2030.

The key regions considered for the Global Quartz Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the demand for quartz in residential and commercial construction projects, coupled with the preference for durable and low-maintenance materials. The North American market, particularly the United States, has been a significant consumer of quartz surfaces. However, Asia Pacific is expected to become the fastest growing during the forecast period, owing to factors such as increasing urbanization, rapid economic growth, and rising construction activities in countries such as China, India, and Southeast Asian nations. Additionally, the expanding middle class, growing disposable incomes, and changing consumer preferences towards modern and durable materials have contributed to the significant growth of the quartz market in this region.
