## **Abstracts**

Global Radioimmunoassay Market is valued at approximately USD 449.8 million in 2021 and is anticipated to grow with a healthy growth rate of more than 5.00 % over the forecast period 2022-2028. Radioimmunoassay (RIA) is an in-vitro assay technique that is used to measure the concentration of antigens in the blood. RIA encompasses the separation of protein from a mixture by using the specificity of antibody-antigen binding and their quantitation by using radioactivity. The method is hypersensitive and can quantify tiny amounts of hormone or drug levels with the help of antibodies. The increasing usage of RIA in pharmaceutical industries, urbanization with heavy pollution has led to the adoption of Radioimmunoassay across the forecast period. For Instance: As per the United Nations' Department of Economic and Social Affairs Population Dynamics, by 2050 it's projected that more than two-thirds of the world's population will live in urban areas. It's projected that close to 7 billion people will live in urban areas in 2050. Also, with the increasing oncology testing, the adoption & demand for Radioimmunoassay is likely to increase the market growth during the forecast period. However, stringent regulatory approvals impede the growth of the market over the forecast period of 2022-2028.

Global Radioimmunoassay Market is segmented on the basis of geographical reasons as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is deemed as the leader of the market and witnessed robust growth owing to growing technological advancements in clinical therapy, growing oncology testing. Whereas, Asia-Pacific is coming up as one of the promising regions as huge market growth is observed due to factors such as rising population, growing health awareness

would create profitable growth prospects for the Radioimmunoassay Market across Asia-Pacific region.
