Global Railway wiring harness Market is valued approximately USD 1.43 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.6 % over the forecast period 2021-2027. Railway wiring harness is defined as the connection of electrical wires / cables with the use of various materials as vinyl, rubber etc. The wiring harness of any system is used for the transmission of electronic signals and electrical power. The increasing railway projects and rising smart city projects has led the adoption of Railway wiring harness across the forecast period. Increasing railway projects are for the better connectivity to connect remote areas to the mainstream. For instance, As per IBEF, India Railways announced that 40% of dedicated freight corridor (DFC) will be opened for traffic by end-FY21, and 2,800 km route will be completed by June 2022 and passenger traffic was valued at 8.10 billion and is estimated to reach 12 million by 2031. However, environmental challenge impedes the growth of the market over the forecast period of 2021-2027. Also, with rise in metro train and bullet train projects, the adoption & demand for Railway wiring harness is likely to create demand for Railway wiring harness Market during the forecast period.

Global Railway wiring harness Market is segmented on the basis of geographical region as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the technological advancement and increase in better fastest means of communication as

projects of mono rail, and bullet train. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increase in population, rising bullet train projects and rise in FDI would create profitable growth prospects for the Railway wiring harness Market across Asia-Pacific region.
