Abstracts

Global Rainwater Harvesting Market is valued approximately USD 1.168 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.5 % over the forecast period 2021-2027. Rainwater harvesting is practice that has been used for thousands of years for storing the rainwater. The water is collected from land and rooftops in a deep pit by artificial methods. The collected water is treated for further use in drinking and irrigation purposes. This technique aids in water shortage problems. Increased water scarcity due to climate change is the major driving factor for the growth of rainwater harvesting. Also, reduction in the number of groundwater resource also prompts the user to increase rainwater harvesting thus, boosting the growth. Moreover, the minimum maintenance, easy installation process, and availability in a wide range of tank sizes and types, consumers are adopting this technique easily. There are also various government initiatives which helps increase the awareness and adoption of rainwater harvesting. For instance, the government of India constructed various rainwater harvesting infrastructure in the rural and urban areas, assisting equal distribution and access to water. Less awareness about the benefits of rainwater harvesting is a matter of concern because people don't adopt to these practices and every year a huge quantity of water is wasted. Increased urbanization will result into an increase in the demand of more clean water and therefore the market players have the opportunity to upgrade the present technologies.

The regions considered for the analysis of global Rainwater Harvesting market are Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region in utilizing the rainwater and is expected to grow and maintain its
