Abstracts

The global Reach Stacker Market is valued at approximately USD 2.36 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.23 % over the forecast period 2022-2029. Reach stackers are useful in small terminals and medium-sized ports for handling and transporting intermodal cargo containers. Furthermore, these reach stackers are extremely mobile, allowing them to move containers over short distances and pile them in different rows based on their access. The Reach Stacker market is expanding because of factors such as rising trade activities and government spending on building new ports in the forecast period.

According to Statista in 2022, the trade value of goods exported across the world accounts for around USD 22.3 trillion in 2021. Also, China is the leading country in manufacturing goods globally. Whereas rising demand for volume handling capacity of ports & technological advancement & growth activities by market players create lucrative opportunities for the market. However, higher initial costs hamper the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Reach Stacker Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia Pacific dominated the market in terms of revenue, owing to the increasing transportation of goods and commodities, and rising demand for material handling equipment. Also, Asia Pacific is expected to grow during the forecast period, owing to factors such as rising technological advancement, growing penetration of market players and expansion of logistics industries across the region
