Abstracts

Global Recirculating Chillers Market is valued approximately at USD XX Million in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Recirculating chillers are closed-loop chillers that are used to cool the equipment and machines. These chillers find application in industries such as manufacturing, pharmaceuticals and laboratories. Growing demand to provide thermal stability, rising demand due to growth of end-use industries, and new product launches are fueling demand in the market. According to Statista, pharmaceutical market revenue has increased from USD 1,204.8 billion in 2018 to USD 1,265.2 billion in 2020. Also, in January 2019, Huber K?ltemaschinenbau launched Unichiller 220Tw CO₂, a new circulating cooler with CO₂ refrigerant. The Unichiller is developed for working in temperatures from -20°C to 100°C and offers a cooling capacity of 22kW and a heating capacity of 12kW. Furthermore, technological advancements and rising number of machines in end-use industries are expected to inject growth in the market. However, high cost of recirculating chillers and increasing power cost are expected to hinder the growth during forecast period.

North America is the leading region in terms of revenue among Asia Pacific, North America, Europe, Latin America, and Rest of the World, owing to large base of manufacturing units in the region. Whereas, Asia Pacific is expected to grow with the highest growth rate during forecast period, due to flourishing manufacturing and

pharmaceutical sector in the countries such as China and India.
