Abstracts

Global Recloser Market is valued approximately USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Reclosers are high-voltage, automated electric switches, which can detect the trouble in the electric line, automatically and remove the fault in the electric line. It resets the temporary problem and restores the electric power. After three times of trouble re-occurrence the recloser shuts off the power to prevent the line from any accident. The global Recloser market is facing challenges due to the coronavirus pandemic as employees are asked to work from home and manufacturing sectors are temporary shutdown. So various companies have restricted their manufacturing and supply operations which halt the demand of recloser. The increasing demand of power, expansion of transmission and distribution (T&D) networks and rising investments in renewable energy sector and smart grid projects are the few factors responsible for growth of the market over the forecast period. Furthermore, the rising advancements and other strategic alliance by market key players will create a lucrative demand for this market. For instance: on 11th March 2019, Siemens AG launched new siemens compact modular recloser (CMR), which reduced maintenance alternative to single phase, oil-filled recloser. It is a cost effective, lightweight, configurable, and compliant to IEEE C37.60, also integrates the switch unit, control, and voltage power source into a single-insulated epoxy housing, for greater reliability and ease of installation. However,

power industry has the old infrastructure and scarcity of distribution network across the world is the major factor restraining the growth of global Recloser market during the forecast period.

The regional analysis of global Recloser market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world owing to the increasing demand for grid reliability and smarter power networks. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
