Abstracts

Global Recycled Concrete Aggregates Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Recycled aggregate concrete (RAC) refers to the use of an alternative natural aggregate (NA) in concrete, which is obtained by recycling clean concrete waste. These recycled aggregates are manufactured by processing inorganic constituents that include crushing and eliminating older aggregates into aggregates of particular quality and size. Factors such as the thriving growth of the construction and infrastructure industry, growing investment in smart city projects, and raising awareness for the adoption of sustainable products are witnessing the surging market demand across the globe. For instance, as per a Statista report, in 2020, the expenditure on new construction activities across the United States was recorded at nearly USD 1.5 trillion. Also, the construction expenditure has been rising and it is estimated to have reached USD 1.8 trillion by 2025. Consequentially, the growing spending on construction activities is propelling the demand for Recycled Concrete Aggregates, which, in turn, accelerates the growth of the market across the globe. However, the lack of development policies in the emerging nations impedes the growth of the market over the forecast period of 2022-2028. Also, the increasing number of product launches and rising imposition of favorable government housing schemes and residential initiatives are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Recycled Concrete Aggregates Market study

include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rising adoption of recycled concrete aggregates as a sustainable source and surging demand for eco-friendly products. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the rising emphasis on sustainable development, as well as growth of the construction industry, would create lucrative growth prospects for the Recycled Concrete Aggregates Market across the Asia-Pacific region.
