## **Abstracts**

Global Recycled Glass Market is valued approximately USD 4.16 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.7 % over the forecast period 2021-2027. Glass recycling has a number of advantages, including the fact that it retains its purity and quality after being recycled. Glass is made from raw ingredients such as silica, soda ash, limestone, cullet, and others. Growing concerns for effective waste management and sustainable development, as well as government initiatives to promote usage of recycled glass, has led the adoption of Recycled Glass across the forecast period. Strategic materials Inc announced in January 2020 that it would expand its crushed glass abrasives production by opening a new facility in Houston to meet increased domestic demand. According to the corporation, this move will treble the production of broken glass abrasives. However, high cost and installation charges of this product impedes the growth of the market over the forecast period of 2021-2027. Also, advancement in the building & construction industry, usage of recycled glass granules as aggregates alongside gravel and sand products for the production of concrete and recycled glass being used in decorative concrete for aesthetic enhancement of building structures is likely to increase the market growth during the forecast period.

The significant regions including Asia Pacific, North America, Europe, Latin America, and the Rest of the World are examined in the regional analysis of the global Recycled Glass market. In 2019, Europe was the largest consumer of recycled glass products, with a market share of 12.4%. The market in this region is being driven by a high level of public knowledge about recycling methods, as well as government programmes

encouraging the use of recycled glasses. The European Union has already launched the Circular Economy Package to promote waste management and recycling efficiency. Several European governments are raising landfill tax rates to prevent glass waste from being disposed of in landfills, giving the industry under consideration a significant boost in this region.
