Abstracts

Global Recycled Plastic Market is valued approximately at USD 47.36 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5% over the forecast period 2021-2027. Recycled plastic is used to reduce the environment degradation, as plastic is non-biodegradable, so it is recycled and used rather than dumping in the soil or water. The global Recycled Plastic market is being driven by rising demand for packaged food sales which use plastics for the food packaging. For instance: according to the Statista, the global sales of packaged food have increased from USD 2578.9 Billion in 2018 to USD 2644.1 Billion in 2019. Another important driving factor is the rising e-commerce sales around the world. According to the United Nations Conference on Trade and Development, the e-commerce sales have seen an increase from 25.64 trillion in 2018 to 26.67 trillion in 2019. Furthermore, the favorable initiatives to promote the use of recycled plastics, high plastic consumption and increasing awareness regarding environment friendly products will provide new opportunities for the global Recycled Plastic industry. However, increase in the ban on imports of waste or scrap plastics in certain countries such as China and unregulated collection of raw material may impede market growth over the forecast period of 2021-2027.

The regional analysis for the global Recycled Plastic Market is based on the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World.

Asia-Pacific is the leading region across the world in terms of market share and is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027 due to supportive government initiatives for manufacturing as well as adopting environment friendly products, enhancing end-use industries such as automotive, electronics, and others, along with presence of affordable skilled workforce and increasing consumption of plastics in the region.
