Global Regenerative Thermal Oxidizer Market is valued approximately at USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2027. Regenerative thermal oxidizer (RTO) is an industrial device mainly used for the treatment of exhaust air from mills and factories. RTO is designed to very efficiently reduce the lean waste gases such as waste of inventory, waste of defects, over-processing. RTO helps destroy volatile organic compounds (VOCs), hazardous air pollutants, organic halogenated compounds, contaminants and odorous emissions discharged from different industries. To destroy and clean hazardous pollutants and compounds, they use extremely high heat temperatures (1400°F to 1500°F, may go up to 1800°F). RTO demand has been

increasing rapidly as a result of its contribution to environmental safety. Environmental safety concerns are increasing around the world due to an increase in industrial activities, which is expected to be a major driver of growth for the RTO market. However, biofilter and bio-scrubber availability could slow demand for regenerative thermal oxidizers.

Growing urban population and industrialization has led to increased industrial production activities in the Asia Pacific region. Rapid industrial growth will drive demand for regenerative thermal oxidizers in the Asia Pacific region. In addition, implementing pollution control acts and increasing environmental concerns in the Asia Pacific region are expected to make Asia Pacific a prominent market for regenerative thermal oxidizers. The predominance and high presence of the various industries such as Automotive and Chemical in regions such as North America and Europe is estimated to be a promising market for regenerative thermal oxidizers. LAMEA is expected to be a potential market for regenerative thermal oxidizers thanks to the increasing industrial and manufacturing activities in Latin America and Middle East & Africa
