Abstracts

Global Remote Patient Monitoring Market is valued at approximately USD 32.06 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 38.2 % over the forecast period 2022-2028. RPM or remote patient monitoring (RPM) is a system in which healthcare practitioners use equipment to monitor, report, and analyse their patients' acute and chronic diseases when they are not in the hospital or clinic. It allows practitioners to have real-time awareness of a patient's condition, allowing them to make proactive treatment decisions. Increasing geriatric population, cost benefits offered by Remote Patient Monitoring and rising advancements in Remote Patient Monitoring has driven the adoption of Remote Patient Monitoring Market across the projected period. For Instance: Philips launched the Avalon CL Fetal and Maternal Pod and Patch for remote monitoring in the four regions including the United States, Europe, Australia, New Zealand, and Singapore in 2020. Also, incorporation of AI in Remote Patient Monitoring and growing use of Remote Patient Monitoring in epidemics and in the treatment of infectious diseases is most likely to boost the overall growth of the Remote Patient Monitoring Market. However, rising fraud in healthcare, misuse of Social Media, and regional variations in regulations can obstruct the Market's expansion over the projection period of 2022-2028.

The key regions considered for the global Remote Patient Monitoring Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Rising geriatric population and high prevalence of chronic diseases are driving the Market growth in North America. Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The Market is expected to grow during the projected period, due to rising
