Abstracts

Global Rennet Market is valued at approximately USD 683.1 million in 2021 and is anticipated to grow with a healthy growth rate of more than 5.39% over the forecast period 2022-2028. Rennet is a digestive enzyme present in the stomach lining of animals that aids in the digestion of their mother's milk. To produce cheese, rennet is needed to ferment or thicken the milk. It comes from four different sources: plant-based, such as nettles, cardoon thistle, and other plants. The market growth is driven by increase in the use of cheese in different products and growing number of companies in the fast food and beverages products. According to the UK Dairy Trade Association, the country produced roughly 504 thousand metric tons of cheese in 2021. Furthermore, in European nations such as Italy, Russia, France, and Germany the rising cheese-making sector, which uses modern technology and novel production processes, is expected to stimulate demand for rennet. Furthermore, as per Statista, the global quick service restaurant sector reached USD 868.11 billion in 2019. However, due to the coronavirus (COVID-19) pandemic, this value is expected to drop to USD 736.15 billion in 2020. The market is expected to reach USD 797.68 billion in 2021. However, growing vegetarian population impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Rennet Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Europe is leading the market share, owing to the flexitarian and vegan population in the region. However, Asia Pacific is expected to witness substantial market growth due to growing young population in countries such as India and China and growing western culture in the

region.
