Abstracts

Global Resistant Starch Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Resistant starch has low glycemic index, which makes it a suitable substance to protect people against coronary heart disease, stroke, obesity, hypertension and especially type 2 diabetes. Rising prevalence of lifestyle diseases such as diabetes, obesity and others, growing popularity of cereal bars in sportspersons, and growing health awareness are the factors fuelling the demand in the market. For instance, according to International diabetes Foundation, approximately 463 million adults (20-79 years) were living with diabetes in 2019, which is expected to rise to 700 million by 2045. Furthermore, increasing preferences for low carbohydrate, gluten-free and high dietary fiber ready-to-eat (RTE) food products and research and developments to evaluate the environmental and genetic factors of resistant starch on crops are expected to push the market towards further growth during forecast period. Such as, according to Statista, gluten-free food market worldwide is projected to expand to USD 8.3 billion by 2025 from USD 5.6 billion in 2020. However, lack of awareness regarding resistant starch in developing countries may hamper the market in coming years.

North America is leading the market in terms of market share among Asia Pacific, North America, Europe, Latin America, and Rest of the World, owing to rising penetration of obesity and diabetes in the region coupled with rising health awareness. Whereas, Asia

Pacific is expected to grow at the fastest pace during forecast period, due to rising population and growing disposable income of middle-class population of the region.
