## **Abstracts**

Global Respiratory Disease Vaccine Market is valued approximately USD 92.23 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 1.21% over the forecast period 2023-2030. Respiratory diseases affect the respiratory system, which includes the organs involved in breathing. The respiratory system is responsible for the intake of oxygen and the elimination of carbon dioxide from the body. Various conditions can disrupt the normal functioning of the respiratory system, leading to respiratory diseases. The Respiratory Disease Vaccine market is expanding because of factors such as the rising prevalence of respiratory disorders and increasing research and development activities for vaccine development.

The rising prevalence of various respiratory diseases such as Asthma, Pneumonia, Tuberculosis, and more is driving the market growth. For instance, the World Health Organization's (WHO) Global Tuberculosis Report 2021 states that in October 2021, most tuberculosis cases were discovered in South-East Asia (43%), Africa (25%), and the Western Pacific (18%), while fewer cases were discovered in the Eastern Mediterranean (8.3%), and Europe (2.3%). Additionally, according to statistics released by the World Health Organization (WHO), around 10 million individuals worldwide

contracted tuberculosis in 2020, and roughly 1.5 million people died as a result of the disease in October 2021. Moreover, according to Statista in the year 2015, the Number of cases of asthma in senior citizens across India stood at 9 million which increased to 10.7 million in the year 2020, and it is projected to reach 25.4 million by the year 2050. Thus, the rising prevalence of respiratory diseases across the growth is driving the market growth. In addition, increasing government support for vaccine development activities and a rising number of awareness programs is creating a lucrative opportunity to market growth. However, the high cost involved with research and development of respiratory disease vaccines stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Respiratory Disease Vaccine Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the availability of advanced healthcare technologies for vaccine development, rising number of research and development programs, rising investment by public and private companies, and rising healthcare expenditure. Whereas, Asia Pacific is projected to register significant growth owing to factors such as the rising prevalence of targeted diseases, rising healthcare expenditure, and rising government initiatives to promote vaccine development in the region.
