Abstracts

Global Respiratory Pathogen Testing Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.00% over the forecast period 2022-2028. A respiratory pathogens (RP) panel examines the respiratory tract for pathogens. A pathogen is a disease-causing virus, bacterium, or another organism. The respiratory tract is made up of bodily components that help you breathe. Your lungs, nose, and throat are all affected. The increasing investments for respiratory diagnostics and rise in air pollution have led to the adoption of Respiratory Pathogen Testing across the forecast period. For Instance: on December 19, 2019, The National Institute of Allergy and Infectious Diseases (NIAID) announced the establishment of the Infectious Diseases Clinical Research Consortium. NIAID has decided to fund the Vaccine and Treatment Evaluation Units (VTEUs) program (approximately US\$ 29 million per year) for seven years. Also, with the growing demand for home care and point-of-care diagnostic devices, high growth potential in developing Asia-Pacific countries, the adoption & demand for Respiratory Pathogen Testing is likely to increase the market growth during the forecast period. However, large underdiagnosed and undertreated population and lack of awareness impede the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Respiratory Pathogen Testing market study include Asia Pacific, North America, Europe, Latin America and Rest of the World.

Europe is the leading region across the world in terms of market share owing to the rising prevalence of respiratory diseases. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as numerous local players engaging in the manufacturing of respiratory pathogen testing kits would create lucrative growth prospects for the Respiratory Pathogen Testing market across Asia-Pacific region.
