Abstracts

Global Rheology modifiers Market is valued at approximately USD 8 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 3.5% over the forecast period 2022-2028. Rheology modifiers are chemicals that alter the flow of matter. Rheology modifiers are used to adjust the physical and chemical characteristics of a fluid. Rheology modifiers are used in paints, inks, and coatings to control the desired physical and chemical properties. These are designed to provide formulators total control over the viscosity, texture, and suspension of personal care and household items. Increasing Crude Oil Production and Shale Gas Exploration and Increase in Purchasing Power of Middle-Class Population are the major factor driving the growth of the rheology modifiers market. According to U.S. Energy Information Administration, The United States produced over 33.5 trillion cubic feet (Tcf) of dry natural gas in 2020, an average of roughly 91.5 billion cubic feet per day and the second-highest yearly volume ever recorded. Dry natural gas output in the United States was around 10% higher than total natural gas consumption in 2020. Total offshore dry natural gas production was at 1 Tcf in 2020, with 71 percent coming from federal waters in the Gulf of Mexico. Federal Gulf of Mexico output was at 0.7 Tcf, or 2% of total dry natural gas production in the United States. In 2020, offshore output from Alabama, Alaska, California, Louisiana, and Texas accounted for around 0.3 percent of total US dry natural gas production. However, Environmental Impact impedes the growth of the market over the forecast period of 2022-2028.
