Abstracts

Global Riboflavin Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Riboflavin refers to vitamin B2. It is extracted from both plant- and animal-based sources, such as milk, meat, eggs, nuts, enriched flour, and green vegetables. It helps the body break down carbohydrates, proteins and fats. It also contributes to the development of the skin, lining of the digestive tract, blood cells, and brain function. The growing incidences of riboflavin deficiency disorders and rising consumption of healthcare supplements as well as increasing application as food color and fortification are key factors accelerating the market growth.

According to Statista – in 2021, the global dietary supplements market was estimated at USD 137 billion. And the market is projected to grow to USD 185.1 billion by 2025. Also, the rising health consciousness among individuals and growing investment in R&D activities would create lucrative growth prospectus for the market over the forecast period. However, the high cost associated with fortified food products stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Riboflavin Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region in terms of market share owing to presence of leading market players as well as growing demand for dietary supplements in the region.
