Global Rice Husk Ash Market is valued approximately USD 2.51 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.09 % over the forecast period 2021-2027. Rice Husk Ash is a type of renewable agriculture by-product, produced from rice milling. It is produced after burning of rice husk. Risk husk ash constitutes of 155-20% of silica, 25%-30% of lignin, 50% of cellulose and 10%-15% of moisture. The low manufacturing and raw material cost of rice husk ash will drive the market. According to International Journal of Engineering Research & Technology (IJERT), in laboratory condition, the production cost of rice husk ash may cost approximately USD 0.22 per kg. Rice Husk Ash is also an excellent source of silica which is an important component in rubber and food industry. According to Statista, global consumption of natural and synthetic rubber was increased from 28410.1 metric tonnes to 29186.1 metric tonnes in 2017 and 2018 respectively. However, improper disposal of Rice husk ash may cause pollution, which impedes the growth of the market over the forecast period of 2021-2027. Also, with the cost-effectiveness of rice husk ash as compared to other construction raw material, the adoption & demand for Rice Husk Ash is likely to increase the market growth during the forecast period.

The regional analysis of global Rice Husk Ash market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the leading region across the world in terms of market share owing to the growing Construction and Steel Industry.
